INTRODUCTION

This guide will show you how to replace the screen in a CyberpowerPC Fangbook HX6 with minimal difficulty.

🔧 TOOLS:

- Phillips #0 Screwdriver (1)
- Spudger (1)

This document was generated on 2020-11-28 06:59:41 AM (MST).
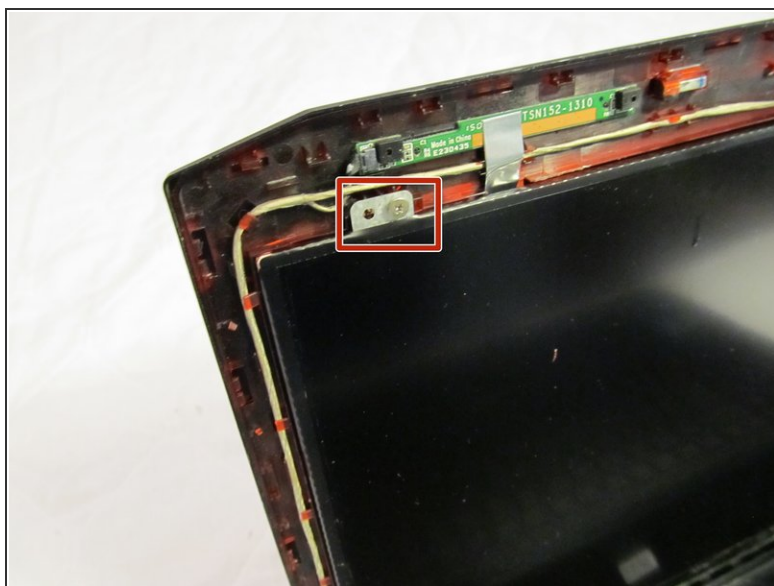

Step 1 — Screen

- To replace the screen you will need a screwdriver (a size zero was used in this guide), and a tool that can be used to pry off the screen covering (a spudger was used in this guide).
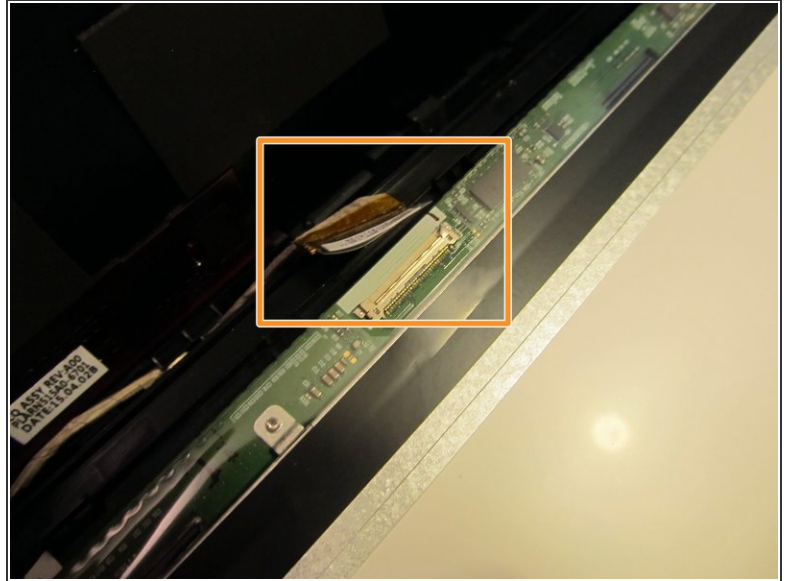

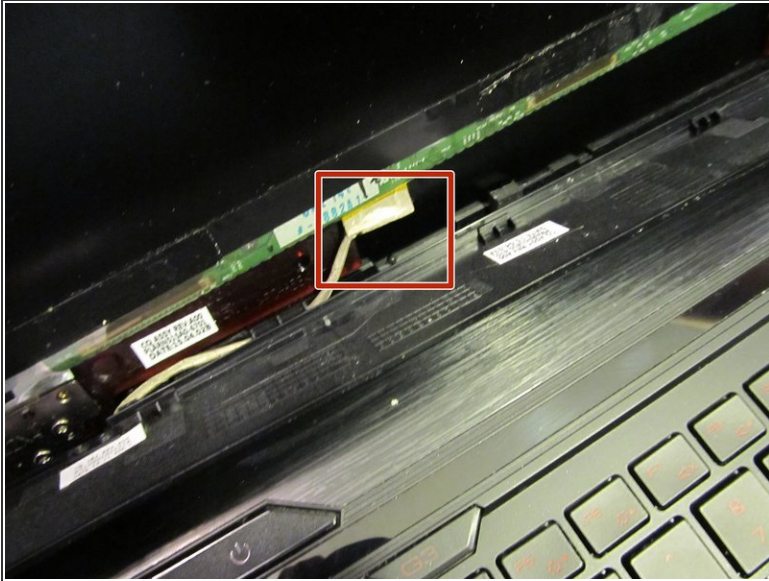

Step 2

- Insert the spudger gently into the seam that connects the front plate to the rest of the device.

- Move the tool carefully around the screen and apply a small amount of pressure. You are trying to undo several clasps holding the front plate on.

- Do this on all sides of the face plate except for the bottom. The bottom will have a strip of adhesive you will need to carefully pull off to separate the face plate from the bottom of the screen.

Step 3

- Remove the two 4mm silver screws on both sides of the top of the screen.

- Once you have removed them, gently pull the screen off of the aligning dials (the small plastic pieces to the left of the screws).

Step 4

- At this point the only thing keeping the screen attached to the laptop is this small wire and connector shown here.

- Gently pull the screen out and turn it over so that you can see where the connector is attached.

- Carefully remove it. Once this is done you have successfully removed the screen from your laptop.

To reassemble your device, follow these instructions in reverse order.
