Canon EOS 60D Left-Side Port Cover Replacement

This guide will show how to remove the port cover, and side of the camera.

Written By: Eric D

INTRODUCTION

This will allow you access to the ports, or if you need to replace the dust cover, will allow you to do that.

🔧 TOOLS:

- Phillips #00 Screwdriver (1)
- Spudger (1)

This document was generated on 2020-11-20 09:11:20 PM (MST).

Step 1 — Rubber grips

- Use a thin piece of plastic, spudger, or fingernail (if you have them) to lift up the edge of the grip, and pull up slowly.

- Repeat for the other two grips

- (i) The large one on the battery-side is the easiest to start with. This is required to remove the front & back panels

- (i) The small one on the back is a bit difficult to get started, but not really difficult to remove.

- (i) The one on the AV panel will be easier if you open up the AV port cover.

- Remove the adhesive like you would rubber cement, just rub your finger against it, it will come off.

- Optionally throw the balled up adhesive at people pretending its a booger :)

Step 2 — Left-Side Port Cover

- Remove 3 screws

Step 3

- Remove the small Screw under the Flip cover too

Step 4

- Using a Spudger, fingernail, or other thin plastic tool to wedge the panel off of the camera

- Start at the camera's front. Pulling on the rubber av-cover may be enough to get it to move off the body

- Only pull about 1/4" (3-5mm). There is a tab that will need to slide out

Step 5

- Slide the rear part of the cover out.

Step 6

- At this point, the only thing holding on is the dust-cover is hooked onto the front panel

- Slide down to remove without damaging the cover. (see photo with cover removed)

- You can see how the cover, and side piece fit together in the second image.

To reassemble your device, follow these instructions in reverse order.
