INTRODUCTION

Remove the front cover to access the lens mount, manual and autofocus switch, lens release switch, timer light, and other components.

⚒ TOOLS:

- Phillips #00 Screwdriver (1)

Step 1 — Preparation

- Retrieve your Pentax K200D, the lens mount cover, and required tools.

- Remove the lens, if you have one attached, and replace it with the lens mount cover to make handling and repair easier.

Step 2 — Flash

- With the camera turned on, press the pop-up flash button to release the flash.

⚠ Be sure to turn the camera back off before proceeding.

- Remove the two 4.3 mm Phillips screws securing the top edge of the front cover to the top cover.

Step 3 — Bottom cover

- Remove the seven 4.3 mm Phillips screws securing the bottom cover to the camera body

- Remove the two 2.5 mm Phillips screws also securing the bottom cover to the camera body

- (i) Open the battery door and carefully remove the bottom cover, as the battery door components become unsecured when the bottom cover is removed.

Step 4

- Remove the two 4.3 mm Phillips screws securing the right side of the front cover to the camera body.

To reassemble your device, follow these instructions in reverse order.
