

How to Remove The Logitech K120's Keycaps

Keyboards can often get dirty. This usually means cleaning them. This guide is for taking off the keycaps of Logitech's K120 keycaps.

TOOLS:

- [Spudger](#) (1)
-

Step 1 — Removing The Small Keycaps

- For small keycaps (1st image), the only tool needed is a spudger. Pry the keycap off by wedging a spudger beneath the key and prying up. (Shown in 2nd image)
- ❗ Preferably, use a plastic spudger. A metal spudger may damage the keycap.

Step 2 — Removing Large Keycaps

- When removing large keycaps (shown in image 1), a metal bracket connects the keycap to the front chassis. (Image 2) Use a spudger to separate the bracket from the keycap.

The key caps on the Logitech K120 keyboard are very easy to remove, you just need to pry a bit.
