

iPhone 8 Back Glass Replacement

iPhone 8 Back Glass Replacement

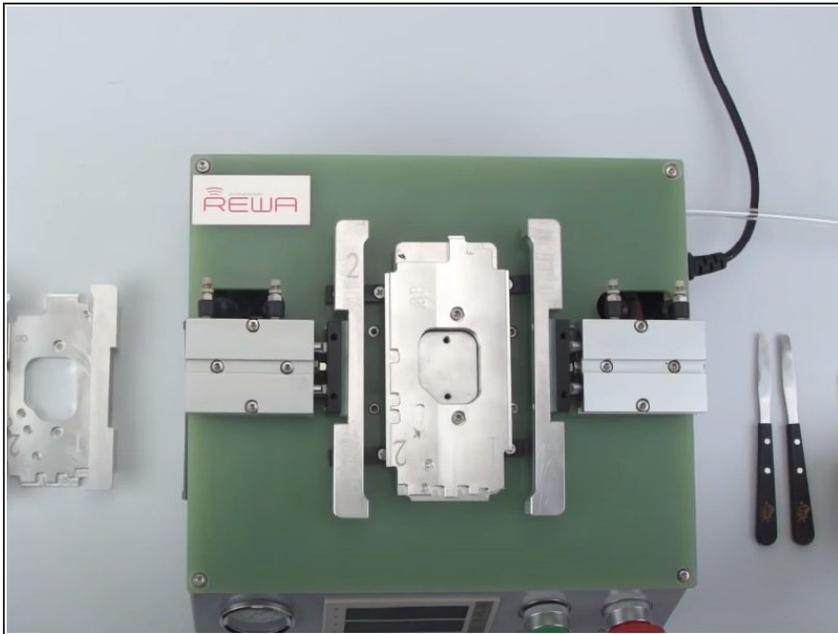

Written By: Phryne

INTRODUCTION

This guide demonstrates a professional-level repair requiring advanced tools. With this special back glass separator, a broken iPhone 8/8P/X back glass can be removed in just 3 minutes. Residual glue can also be removed easily, which is convenient for subsequent attaching of a new back glass.

Step 1 — iPhone 8 Back Glass Replacement

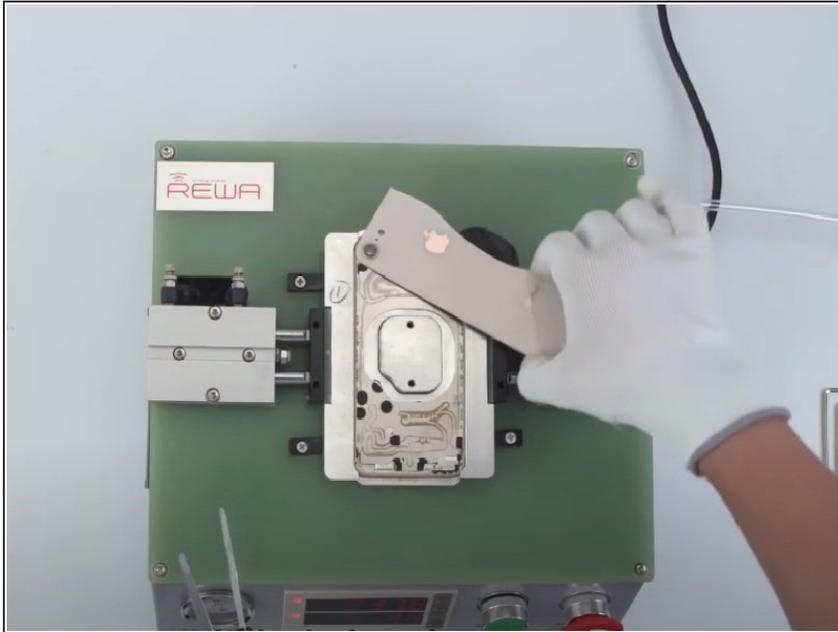

- Wire up the Back Glass Separator. Connect the Back Glass Separator with Air Compressor via an air pipe. Switch on the Air Compressor. Open the air compressor valve.
- Switch on the Back Glass Separator. Rotate the pressure regulating valve and set the value as 0.4Mpa.

Step 2

- Place iPhone 8 back glass assembly into the corresponding mold. Press 'Up'. With the temperature rising to 240°C, press 'Start'. The back glass assembly is clamped tightly by the mold.
- After 200 seconds of heating, mandril of the machine starts to work.

Step 3

- Remove the back glass after 18 seconds. Remove glue residue on the back glass thoroughly.
- iPhone 8 back glass separating has been completed successfully.
- Attach a new back glass to the midframe in the end.
