  - [Phillips #00 Screwdriver](#) (1)
-

## Step 1 — Battery

- Remove the 3mm Phillips #00 screw on the back of the Insignia NS-4v17.

## Step 2

- Detach the back cover by carefully pulling up and out on the back plastic casing.

 Do not pull apart the red wire connecting the battery to the device.

### Step 3

- Use the plastic opening tool to reach underneath the battery, opposite from the side with the red wire, and remove it from its plastic case.

 Be careful to not tear the wires while opening the case.

### Step 4

- Reach under the white plastic wire connector using the plastic opening tool and disconnect it from the socket.

 Do not disconnect wires from plastic connector.

To reassemble your device, follow these instructions in reverse order.
