INTRODUCTION

This guide will demonstrate how to open the back cover panel of a ThinkPad X395. Use this guide to access the internals of the laptop before performing any maintenance or repairs.

🔧 TOOLS:

- iFixit Opening Picks (Set of 6) (1)
- Phillips #1 Screwdriver (1)

This document was generated on 2022-10-07 09:48:35 AM (MST).

Step 1 — Loosen the back screws

⚠ For your safety, discharge the battery below 25% and power down your device before disassembly.

- Use a Phillips #1 screwdriver to fully loosen the five screws on the back cover.
  - ⓘ These are captive screws—they won't come out after being loosened.

Step 2 — Release the clips

- Orient your laptop so that the screen's silver hinges are closest to you.

- Insert an opening pick between the back cover and the device body near a hinge corner.

- Pry upward to release the retaining clips. Listen for a loud click when each clip releases.

Step 3

- Insert the opening pick between the back cover and the device body at the other hinge corner.

- Pry upward on the cover to release additional clips.

Step 4 — Remove the back cover

- Lift and remove the cover up from the laptop, starting with the edge nearest to you.

- Shift the cover side to side if the center clip feels stuck.

- ⓘ The cover will hinge open before completely separating from the rest of the laptop.
