Behringer BCD3000 Disassembly

If the jog wheels scratch and the faders get stuck you'll need to take this bulky baby apart.

Written By: Tobias Isakeit
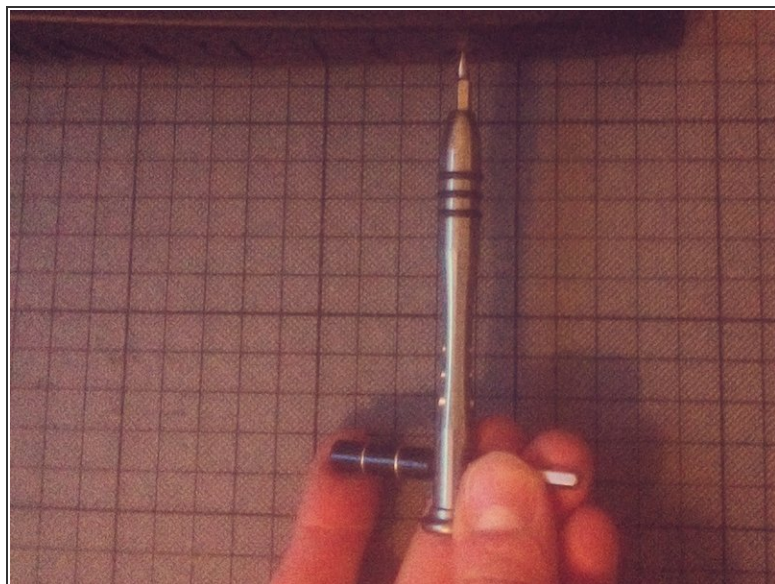

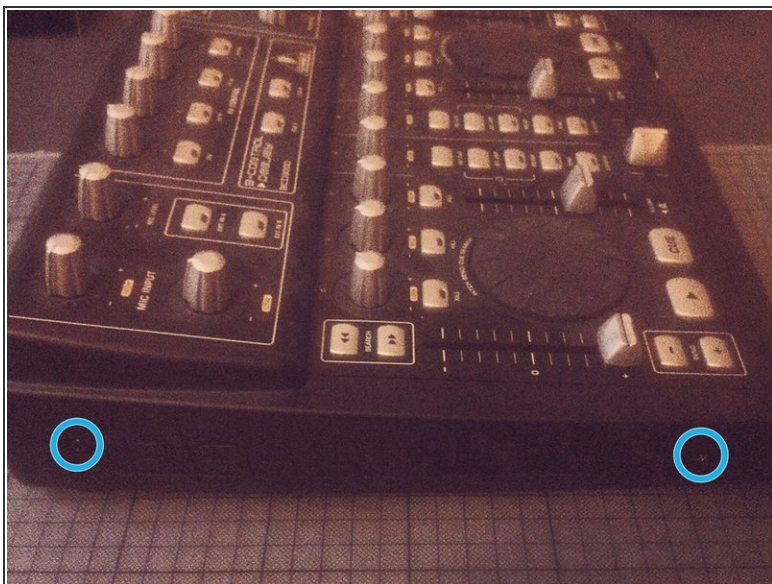

🔧 TOOLS:

- Pro Tech Toolkit (1)

Step 1 — Behringer BCD3000 Disassembly

- Unplug from all cables

Step 2 — opening the sides

- unscrew two Phillips screws on each side of the BCD3000

- If the screws sit too tight, you can use the extension for better torque

Step 3 — loosening the top part

- unscrew another two Phillips screws on each side

Step 4

- Lift the upper control part.

⚠ Be careful, there are still some cables connected to the lower section.

- Disconnect the cables by walking them out of their sockets.

Step 5

- Remove the upper part completely.

Step 6

- Disconnect the two cables from the lower section to the connector board.

Step 7

- Slide the lower section to the front.

- Now you can lift it and take it aside.

Step 8

- Disconnect the separate boards.

- Now you can take the modules out by unscrewing them from the case.

Step 9

- The jog wheels on the front panel can be taken off by using a spudger and levering them out.

Step 10

- The knobs can easy be removed just by pulling.

Step 11

- Same goes for the knobs on the top section of the front panel.

To reassemble your device, follow these instructions in reverse order.
