 **TOOLS:**

- [iFixit Opening Tools](#) (1)
 - [Phillips #1 Screwdriver](#) (1)
 - [Tweezers](#) (1)
 - [Detailing Brush](#) (1)
 - [Soldering Iron](#) (1)
-

Step 1 — Speakers

- Make sure to open the back cover easily using the plastic opening tool.

Step 2

- Remove back cover by prying away from the device.
- ⓘ The easiest place to remove the cover is from the bottom and top; try to open it from the right and left sides.
- ⚠ Open it gently. Do not open it with too much pressure, so that the plastic back cover do not break.

Step 3

- To remove the battery, make sure the four 5mm Philips screws on each side of your device is open using the Phillips #1 Screwdriver
- After you remove your four 5mm Philips screws, use your plastic opening tool to help you open the plastic cover of your device.

Step 4

- After you remove your four 5mm Philips screws, use your plastic opening tool to help you open the plastic cover of your device.

Step 5

- Gently remove the plastic cover that is covering the camera.

Step 6

- Separate the two halves of your Kurio Touch 4S and lay them besides each other.

Step 7

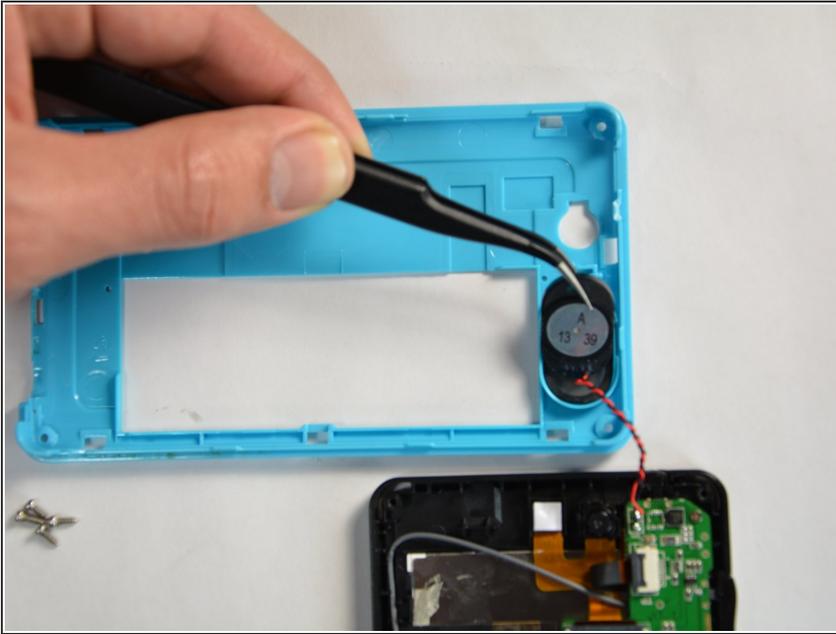

- Use the soldering tool to detach the speaker wires.
- ⓘ For more information on how to solder the wires [Click here](#)

Step 8

- Press the speaker in the manner shown so that it comes out of its slot.
- ⚠ Be sure not to apply too much force or you can break the back cover.

Step 9

- Use the Tweezers to remove the speaker from its place.

⚠ Remove the speaker gently.

To reassemble your device, follow these instructions in reverse order.
