INTRODUCTION

If there are visible scuffs or scratches in the lenses, they may need to be replaced. However, before buying new replacement lenses, be sure to give the current lenses an obligatory wipe down with a [cleaning rag](#). Often times dust and dirt collects on the lenses and makes them appear blurry.

Step 1 — Remove Lens

- With the Oculus facing up, twist the right lens clockwise and lift it out. Repeat for the left lens twisting counterclockwise instead.

To reassemble your device, follow these instructions in reverse order.
