## **INTRODUCTION**

This guide explains how to remove and replace the shutter motor in the Sony Cybershot DSC-P52

# **TOOLS:**

• Phillips #0 Screwdriver (1)

# **PARTS:**

Replacement shutter motor (1)

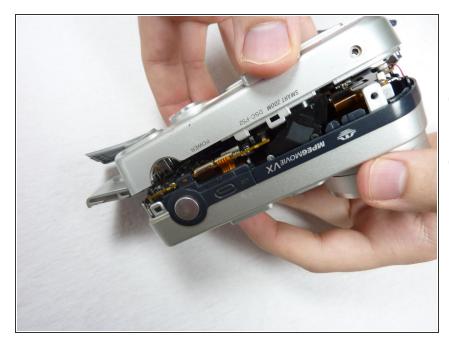

#### Step 1 — Outer Case

- Open the battery compartment and remove the batteries.
- Remove all of the visible screws on the outside of the case.
- i There should be three of them that are all easily located.

- Open the memory card compartment.
- Remove the screw next to the memory card slot.

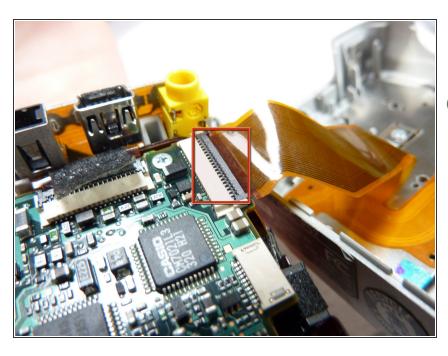

- Pull apart the front and back cover pieces carefully.
- i The front cover should come completely free with little effort.
- i The back cover will still be attached to the circuit board.

- Simultaneously unclip all of the clips holding in the circuitry. Remove the back case.
- i The circuitry will still be connected to the back case by ribbon cables.

Open the case as shown.

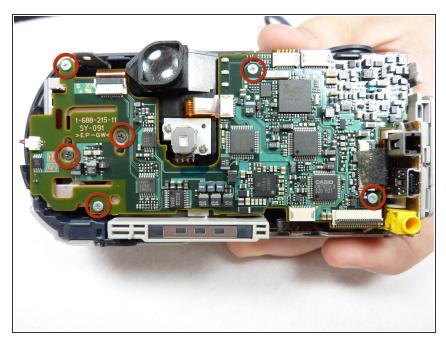

- Unclip the clip holding the ribbon cable in.
- Other ribbon cables might not have a clips.

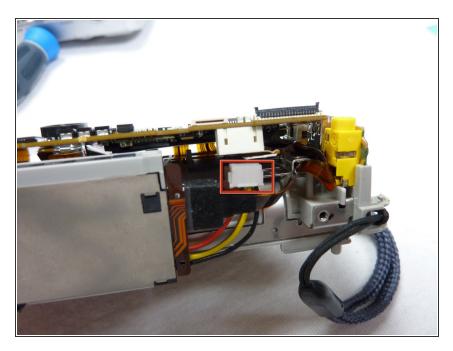

Pull the ribbon cable out.

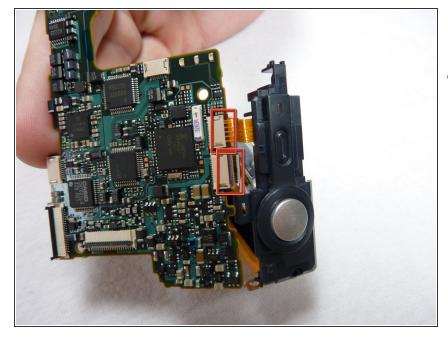

#### **Step 8** — **Motherboard Assembly**

- Remove all six screws on the front side of the motherboard circled in the picture.
- Pull the motherboard from the rest of the housing.
- i It will still be connected to the flash unit.

 Remove the cable on the back side of the motherboard.

- Detach the ribbon cables shown.
- Careful! Touching the leads of the large yellow capacitor can result in a painful shock.
  - Remove the flash unit from the motherboard.

## Step 11 — Shutter Motor

- Remove screw securing motor and mount in place.
- Be careful to leave shutter gears in the correct position

#### Step 12

- Remove the two screws holding motor to mount/gears.
- Remove the motor from the mount.

To reassemble your device, follow these instructions in reverse order.
