

Blu Studio 5.5 Speakers Replacement

If your phone is no longer able to produce that crisp and clear sound you expect from it here is a way to fix it.

Written By: Luis Gomez-Atehortua

INTRODUCTION

The speakers are what produces the sound externally from the phone's applications to the surrounding. Many times they can be damaged from the impact of a fall or water damage and may need to be replaced. However, take into consideration that the wires that connect it to the sub PCBA board are soldered onto there so that will require a more delicate technique to replace.

TOOLS:

- [iFixit Opening Tools](#) (1)

Not essential, but may be easier than opening device by hand

- [Tweezers](#) (1)
 - [Phillips #000 Screwdriver](#) (1)
-

Step 1 — Battery

- Locate the notch to remove the back panel at the lower left corner of the panel.
- Insert the plastic opening tool or a fingernail into the notch.
- Apply force upwards until back panel becomes loosened.

Step 2

- Remove the loosened back panel and set aside.
- Locate the notch to remove the battery.

Step 3

- Insert a plastic opening tool or your fingernail into the notch and apply force upwards until the battery is loosened.
- Remove the battery and set aside.

Step 4 — Back Panel Assembly

- Locate all twelve screws along the back panel:
 - Seven 5mm screws.
 - Five 3.5mm screws.
- Using a Phillips #000 screwdriver, remove all twelve screws.

Step 5

- Now that all the screws have been removed, use a plastic opening tool to carefully pry at each of the corners until loosened.
- ⚠ Be extra careful when prying open as it may damage or snap the thin sides of the panel.
- Place the plastic opening tool inside the loosened panel and gently push upwards and move along the phone to remove the back panel.
- Remove the panel as if you were turning the page of a book.

Step 6 — Speakers

- Using a pair of tweezers grasp the speakers that are located below the battery and pry it off as it is glued onto the phone assembly.
- ⓘ The speakers are connected by a pair of red and blue wires that are soldered onto the SUB PCBA component and will need to be soldered back on.
- You can now remove the speakers and replace them.
- ⚠ It might be better to consider replacing the entire SUB-PCBA board instead of just the speakers individually to avoid dealing with the re-connection of the two wires.

To reassemble your device, follow these instructions in reverse order.
